METAL SHREDDER

Vikah Ecotech designs and manufactures high-performance primary metal shredders (SHM-4000) for efficient size reduction of ferrous and non-ferrous scrap in metal recycling plants. These industrial machines are engineered for continuous operation, delivering uniform shredded metal suitable for downstream separation and recycling processes.

Built with heavy-duty twin-shaft configurations, high-torque drives, and wear-resistant alloy steel blades, our metal shredders ensure reliable performance, low maintenance, and high operational efficiency in demanding industrial environments.

Key Features

Core capabilities that make our primary metal shredders powerful, reliable, and efficient for heavy-duty metal recycling operations.

- **Robust Heavy-Duty Construction:** Reinforced steel frame and industrial components ensure durability under high torque and continuous metal shredding.
- **Twin-Shaft High-Torque System:** Dual-shaft design provides powerful shear force for efficient ferrous and non-ferrous metal processing.
- **High Throughput Performance:** Optimized blade geometry and synchronized shafts deliver consistent, high-capacity output.
- **Advanced Safety Protection:** Includes overload protection, auto-reverse, emergency stops, and PLC control for safe operation.
- **Low Maintenance Design:** Replaceable alloy steel blades and accessible components reduce downtime and simplify servicing.

Available Models

Available in the SHM-4000 configuration, designed for high-capacity processing of ferrous and non-ferrous metal scrap. The SHM-4000 metal shredder ensures reliable performance, low maintenance, and long service life in demanding industrial recycling environments.

Electrical System

Power	180 – 220 HP
No. of Motors	2
Voltage	As per Client Requirement
Drive	Electric
Control Panel	MCC / PLC Controlled

Cutting Section

Cutting Chamber	4000 × 900 mm
Blade Thickness	50 mm
Blade Diameter	500 mm
Rotor Diameter	360 mm
Production Capacity	4000 – 4500 kg/hr

Dimensions and Weight

Length	4300 mm
Width	1650 mm
Height	2450 mm
Weight	Approx. 12,000 kg

Applications of Metal Shredder

Our metal shredders are extensively used in industrial and recycling applications requiring efficient primary shredding of ferrous and non-ferrous metal scrap for downstream processing.

Scrap Metal Collection Centers

Industrial Waste Management

Automobile Recycling Units

Municipal Recycling Facilities

Metal Recycling Plants

Metal Processing Industries

Technical Features

Our primary metal shredders feature a high-torque twin-shaft system for efficient reduction of ferrous and non-ferrous metal scrap. The heavy-duty steel structure and reinforced cutting chamber ensure stable continuous operation, while wear-resistant alloy steel blades provide long service life. These shredders are ideal for processing mixed metal scrap and industrial metal waste in primary recycling lines.

Why Choose Vikah Ecotech Metal Shredders?

Vikah Ecotech stands out as a reliable metal shredder machine manufacturer in India due to our commitment to robust engineering and industrial performance. Our metal shredders are designed for continuous operation, low maintenance, and consistent metal size reduction in demanding recycling environments.

- High-torque twin-shaft shredding technology
- Heavy-duty alloy steel cutting blades
- Efficient processing of ferrous & non-ferrous metal scrap
- Strong nationwide installation and after-sales support
